

# Extended handle for glue gun

## Description

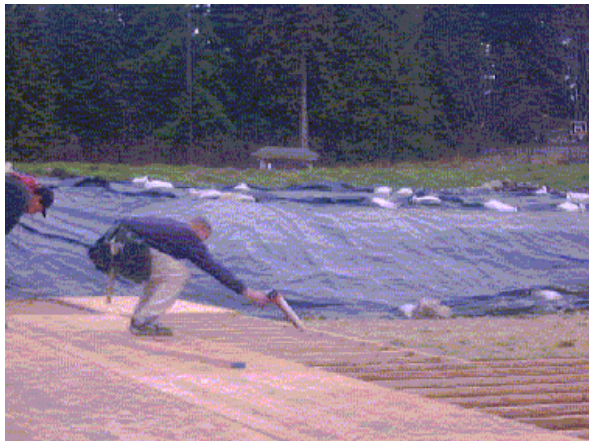

This extended gun helps in keeping the body in a better posture. The legs can be relaxed and the back has a straighter position. It avoids the need for overreaching and squatting for long periods.

*This tool was developed with parts commercially available*

### The new method.

- Combination of an extended gun plus a handle; both commercially available
- Total cost: \$60
- It may reduce hand/wrist fatigue
- Job times were the same between the two methods

### The old way.

Applying glue to floor joists with the back bent
